2Animal Physiological Ecology, University of Tübingen, Germany

The VALIMAR project was financed by the
German Ministry for Education and Research
(BMBF, FKZ 07OTX 21–28. Additional funding
was provided by the foundation of the Landesbank
Umwelt”, and by the UFZ-Center for
Environmental Research Leipzig.
Preface
Rita Triebskorn, Heinz-R. Köhler v–vi

The project VALIMAR (VALIdation of BioMARkers for the assessment of small stream pollution): objectives, experimental design, summary of results, and recommendations for the application of biomarkers in risk assessment

Physicochemical and morphological characterization of two small polluted streams in southwest Germany
Stefan Adam, Michael Pawert, Reinhold Lehmann, Barbara Roth, Ewald Müller, Rita Triebskorn 179–194

Chemical analyses of water, sediment and biota in two small streams in southwest Germany
Wolfgang Honnen, Karin Rath, Thomas Schlegel, Angela Schwing, Dietrich Frahne 195–213

Steroid analysis and xenosteroid potentials in two small streams in southwest Germany
Wolfgang Körner, Ulrike Bolz, Rita Triebskorn, Julia Schwaiger, Rolf-Dieter Negele, Alexander Marx, Hanspaul Hagenmaier 215–229

Histopathological alterations and parasite infection in fish: indicators of multiple stress factors
Julia Schwaiger 231–240

Ultrastructural biomarkers as tools to characterize the health status of fish in contaminated streams
Maike Gernhöfer, Michael Pawert, Michael Schramm, Ewald Müller, Rita Triebskorn 241–260

The hepatic stress protein (hsp70) response to interacting abiotic parameters in fish exposed to various levels of pollution
Heinz-R. Köhler, Cornelia Bartussek, Helga Eckwert, Katrin Farian, Stefan Gränzer, Thomas Knigge, Nicole Kunz 261–279

Hepatic biotransformation enzymes of fish exposed to non-point source pollution in small streams
Anja Rehrens, Helmut Segner 281–297

Alterations of selected metabolic enzymes in fish following long-term exposure to contaminated streams
Jens Konradt, Thomas Braunbeck 299–318
Chemometric discrimination between streams based on chemical, limnological and biological data taken from freshwater fishes and their interrelationships
Uwe Dietze, Thomas Braunbeck, Wolfgang Honnen, Heinz-R. Köhler, Julia Schwaiger, Helmut Segner, Rita Triebskorn, Gerrit Schüürmann

Assessment of water and sediment contamination in small streams by means of cytological and biochemical alterations in isolated rainbow trout (Oncorhynchus mykiss) hepatocytes
Thomas Braunbeck, Marija Strmac

Fish early life stage tests as a tool to assess embryotoxic potentials in small streams
Till Luckenbach, Maja Kilian, Rita Triebskorn, Axel Oberemm

Using indicators of fish health at multiple levels of biological organization to assess effects of stream pollution in southwest Germany
Simonetta Siligato, Jürgen Böhmer

The meiofauna community of two small German streams as indicator of pollution
Stefanie Beier, Walter Traunspurger

Macrozoobenthos communities and biocoenotic assessment of ecological status in relation to degree of human impact in small streams in southwest Germany
Jürgen Böhmer, Armin Zenker, Barbara Ackermann, Berthold Kappus
